EXP:4

Aim

To design a visual representation in Figma highlighting the key elements of mobile network protocol stacks and their functions.

Procedure

1. Open Figma and sign in to your account.
2. Create a new design file.
3. Select the Frame tool and create a frame for the design.
4. Add the title “Mobile Network Protocol Stacks” using the Text tool.
5. Create colored boxes representing the five layers: Application, Transport, Network, Data Link and Physical.
6. Add brief explanations of each layer, including HTTP, TCP/UDP, IP, RLC/MAC and radio transmission.
7. Use arrows and icons to illustrate data flow between the mobile device, base station, mobile core network and internet.
8. Add annotations explaining the functions of each protocol layer.
9. Add simple interactive connections between frames using the Prototype tab, if required.
10. Review the design, correct any errors and arrange the visual elements neatly.
11. Save the design and share the Figma link or present it to demonstrate the completed work.

Result: The visual representation of mobile network protocol stacks was successfully designed using Figma, illustrating the five protocol layers, their functions, and the flow of data between a mobile device, base station, mobile core network, and the internet.
