**EXP:5**

**Design a wireframe for a mobile application that incorporates localization features using Figma.**

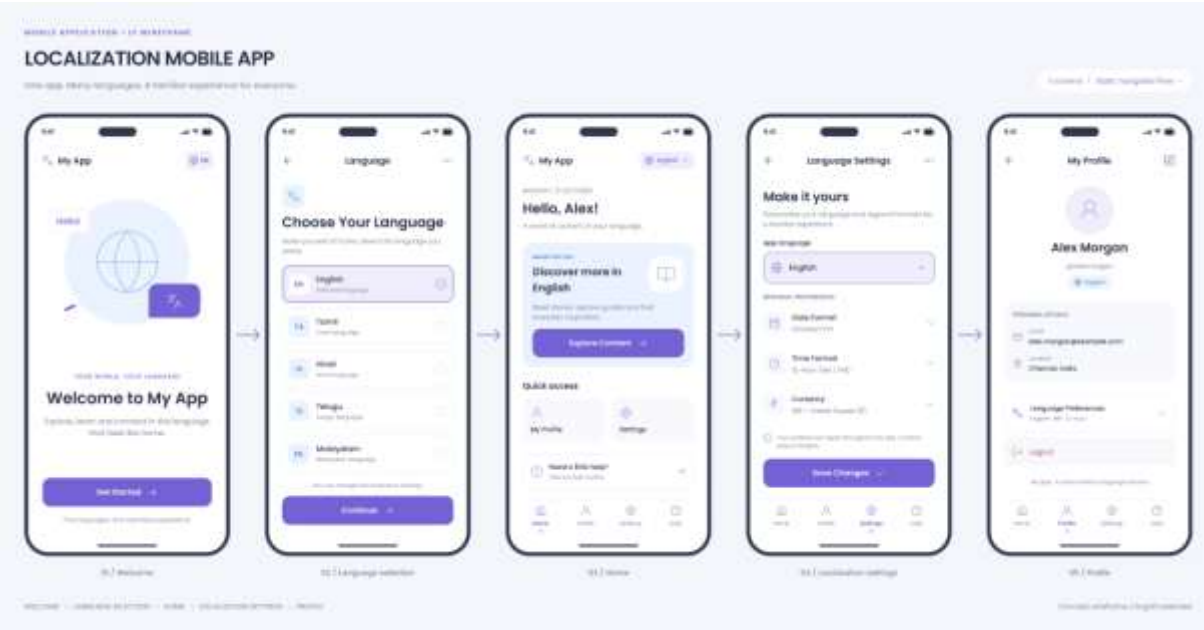

**Aim:**

To design a wireframe using Figma for a mobile application that incorporates localization features.

**Algorithm:**

1. Open Figma and create a new design file.
2. Select a mobile frame of suitable size.
3. Design the welcome page with a title and Get Started button.
4. Create a language selection page with English, Tamil, Hindi, Telugu and Malayalam options.
5. Design the home page with suitable icons and navigation buttons.
6. Create a localization settings page with language, date, time and currency options.
7. Design a profile page with user details and language preferences.
8. Add suitable icons, colours and visual elements to all frames.
9. Connect the screens using the Prototype tab.
10. Add interactive buttons and navigation links.
11. Preview the prototype, review the design and make necessary changes.
12. Save and share the Figma design.

## DESIGN

**Result:**

Thus, a mobile application wireframe incorporating localization features was successfully designed using Figma.
